

Tech stack:

1. React
2. Node
3. Postgres

App features:

1. Create a file system in the application
2. As a user I should be able to create new folders in the app
3. As a user I don't want other people to see my documents/folder unless I explicitly share them.
4. As a user I should be able to create new files in any folder
5. As a user I should be able to modify/delete the contents of any file I have permission with.
6. As a user I should be able to share the document with any other user in the application I want.
7. As a user I can restrict the document permission to the shared users about what they can do (Modify/View)

Estimated time: 7 days

Expectation: With single command in the app, i should be able to run fully functional app in my local without any further dependencies.
